

OPEN-SOURCE FOUNDATIONS. COMPANY-CONTROLLED DEPLOYMENT.

Your business memory. Your connected tools. Your AI system — owned by you.

OpenXCEL AI remembers your company's knowledge, connects your tools, and helps your team create, manage and automate work.

WHAT COMES TOGETHER

01

MEMORY

Knowledge, files
and decisions

02

ASSISTANTS

Personal support
and shared work

03

ACTION

Connected tools
and useful outputs

Built around your business.
Implemented, maintained and improved with AiXCEL.

AiXCEL Solutions

Your AI implementation partner

STOP STARTING FROM SCRATCH.

Put your knowledge to work.

Give people access to relevant context and useful assistants in Slack or a dedicated web workspace.

01

Remember the business

Retrieve approved procedures, files, client history and meeting decisions. Keep context available for the next task.

02

Give people assistants

Personal and shared assistants follow role-specific instructions and use the tools each person is allowed to access.

03

Create and revise

Prepare images, copy, page drafts, reports and follow-ups. Keep requests, revisions and deliverables together.

04

Carry meetings forward

Retrieve decisions, draft follow-ups and propose next actions without opening private meeting archives to everyone.

05

Connect operations

Bring authorized CRM records, task status and account information into the workflow. Review proposed updates.

06

Build around your process

Configure onboarding, offboarding, reporting, approvals and sales handoffs around the way your business operates.

Connect CRM, email, meetings, task tools and advertising platforms such as Meta Ads. We select, implement and test the connections for your release.

BUILT FOR YOUR COMPANY. CONTROLLED BY YOUR COMPANY.

Make it yours.

Open-source foundations give us room to build around your processes. A clear handover makes control practical.

01

Your accounts and data

Company-controlled deployment access, business data and connected accounts.

02

Your people and permissions

Decide what stays personal, what teams share, and who can use each connection.

03

Your identity and workflows

Adapt branding, roles, instructions, outputs and approval steps to your business.

04

Your supported AI choices

Choose suitable models and tool connections for the jobs your team needs.

05

Your access and handover

Documented configuration, exports, administrator access and agreed custom deliverables.

You decide what the system can access.

Your team reviews the work and approves the actions that need it.

Deployment, data and agreed custom work remain under your control. Underlying software and third-party services retain their licenses.

FROM A REQUEST TO SOMETHING YOUR TEAM CAN REVIEW.

A brief becomes a work package.

An existing Slack deployment received a PDF brief, clarified missing details and returned checked landing-page deliverables into the conversation.

ORIGINAL SCREENSHOT EXCERPTS

and calendar embed code. If you don't have either one yet, tell me which is missing and I'll use a clearly marked placeholder for that one. For booking, also tell me whether to use the GHL calendar embed or link out to the Jane app.

I'll build all 3 pages (opt-in / booking / thank-you) once you confirm.

Ahmad Bukhari 2 minutes ago

I do not have either embed code for this test. Please use clearly labeled placeholders for the GHL form and the GHL calendar, then proceed.

ChiroCandy LP Design APP Just now

On it — building the 3-page funnel in `rising-sun-acceptance-v11-0915` with clearly labeled placeholders for both the GHL form and calendar. I'll pull brand colors/logo from `risingsunchiro.com` and check for public Google reviews, then run the full contrast/layout/keyboard QA before delivering files here.

Clarification and review choice
Captured from the deployed Slack workflow.

Thank You, St. Peter!

Thanks for reaching out — check your booking confirmation for your appointment details.

Here's What's Next

1. Check your email and text — you'll receive a confirmation shortly.
2. Save the date and arrive about 10 minutes early.
3. Bring a photo ID and any relevant imaging or medical records you have.

What to Expect at Your Visit

Your first visit is about understanding your problem. Dr. Seth or Dr. Andrea will take you through a thorough evaluation, review any imaging, and explain what appears to be driving your symptoms — then walk you through the options that fit your case. No pressure, no one-size-fits-all package.

Landing-page draft
An actual page preview produced during the deployment tests.

desktop/mobile captures

The accepted repeat-brief run reused corrected customer assets and regenerated its checks. QA notes and a delivery manifest accompanied the package. This shows delivery for review; publishing and live booking are later steps.

MAKE THE NEXT STEP EASIER TO SEE.

Keep work moving.

Our custom operating-system work shows how AI can connect to the business applications your team needs.

Actual sales workspace: conversations, commitments and next actions in one view.

☐ Signed scope	Accept the latest quote with signed evidence
☐ Agreed price	Add a priced quote
☐ Client contact	Choose a primary contact
☐ Key date	Add an open deal task with a due date
☐ Brand assets	Record where Delivery can find them
☐ Billing details	Record the billing contact or TRN status

Actual delivery-readiness checklist: scope, contact, date, assets and billing information.

These are excerpts from an AiXCEL-built sales operating system. We can develop and connect applications like this around your AI implementation.

Meeting memory that respects context

Existing deployments also document private meeting sync, retrieval and deliberate sharing of selected knowledge.

BRING ONE WORKFLOW.

See what your system could do.

Start with repeated work: meeting follow-through, client reporting or campaign delivery. Expand from a useful first release.

01

Choose the work

Map the people, tools, knowledge and review steps involved.

02

Configure and connect

Build the agreed workflows around your access rules and processes.

03

Test with your team

Check real outputs, permissions and approval paths before launch.

04

Keep improving

Train your team, maintain the system and develop the next useful capabilities.

Let's map your first implementation.

Bring your tools, one recurring task and a difficult handoff.
